

6. Testing the UI Policy

After saving the UI Policy and its actions, test the configuration using an Incident record.

- Open an existing Incident or create a new Incident.
- Change the State to In Progress.
- Verify that Assignment group, Assigned to, Work notes, and Short description become mandatory.
- Verify that Caller is read-only.
- Verify that the configured fields remain visible.
- Change the state away from In Progress and verify the reverse behavior if Reverse if false is enabled.
