

7. Expected Result and Conclusion

The UI Policy dynamically controls Incident form fields based on the defined condition. When the Incident state is In Progress, the configured UI Policy Actions are applied automatically.

- Required fields are clearly enforced.
- Read-only fields cannot be edited through the form.
- Visibility can be controlled according to business requirements.
- Users follow a consistent data-entry process.
- The configuration reduces incomplete Incident records and improves data quality.

Conclusion

ServiceNow UI Policies provide a simple way to control form behavior without requiring custom scripting for basic field-level requirements. The Incident Data Validation policy ensures that important Incident information is captured consistently while allowing the form to respond dynamically to the Incident state.
